

**List61B, SLList, and AList:**

Reference Sheet, Page 1

```
public interface List61B<T> {
    public void addLast(T x);
    public T getLast();
    public T get(int i);
    public int size();
    public T removeLast();
    public void insert(T x, int position);
    public void addFirst(T x);
    public T getFirst();
}

public class SLList<T> implements List61B<T> {
    private class Node {
        T item; /* Equivalent of first */
        Node next; /* Equivalent of rest */
        Node(T i, Node n) {
            item = i;
            next = n;
        }
    }
    private Node sentinel;
    private int size;
    public SLList() {
        sentinel = new Node(null, null); size = 0;
    }
    ...
}

public class AList<T> implements List61B<T> {
    private T[] items;
    private int size;
    public AList() {
        items = (T[]) new Object[8]; size = 0;
    }
    private void resize(int s) { ... }
    ...
}
```

**IntList:**

Reference Sheet, Page 2

```
public class IntList {  
    public int first;  
    public IntList rest;  
  
    public IntList(int f, IntList r) {  
        first = f;  
        rest = r;  
    }  
    /** Returns an IntList with the given numbers.*/  
    public static IntList of(int[] input) { ... }  
}
```

**JUnit methods:**

```
assertEquals(Object x, Object y)  
assertEquals(int x, int y)  
assertEquals(double x, double y)  
assertTrue(boolean b)  
assertFalse(boolean b)  
assertNotNull(Object x)  
assertArrayEquals(Object[] x, Object[] y)  
assertArrayEquals(int[] x, int[] y)  
assertArrayEquals(double[] x, double[] y)
```

**Iterator, Iterable, Comparator, Comparable:**

```
public interface Iterator<T> {  
    boolean hasNext();  
    T next();  
}  
  
public interface Iterable<T> {  
    Iterator<T> iterator();  
}  
  
public interface Comparator<T> {  
    int compare(T o1, T o2);  
}  
  
public interface Comparable<T> {  
    int compareTo(T obj);  
}
```
